

# POLIURETAN (PU) POLYURETHANE (PU)

Poliuretani ili PU su alveolarni izolatori što ih izjednačava sa ostalim izolatorima te daje vitkost materijalu.

Naše jakne su iz vodootporne tkanine sa vanjske strane te omogućuju savršenu vodonepropusnost. Šavovi su termovareni, šivani zajedno na velikoj temperaturi kako bi omogućili odličnu zaštitu od vjetra te vode za cjelokupnu odjeću.

The polyurethane or PU is an alveolar insulator which, to lower thickness, brings a heat insulation equal to other insulators.

Our parkas are made with a waterproof fabric on its outside and offers a total impermeability. The sewings have been thermowelded, it's to say stitched together with heat in order to ensure a perfect water and wind tightness for the whole garment. This operation confers also a very neat finish.
